Privacy Policy for Life

Last updated: October 13, 2026 · Published by NG Development (ngdev.org)

In short

- Your app-usage data stays on your phone. It is never uploaded to our servers.
- The only text that leaves your phone is what you type into the nightly plan, plus a few profile details used to personalize it.
- We don't sell your personal information, we don't read the content of other apps, and we don't use Android's Accessibility service.
- You can delete everything from Settings → "Delete my data".

1. Who we are

Life ("the app") is published by NG Development ("we", "us"), ngdev.org. For privacy questions or requests, contact us at [SUPPORT EMAIL].

2. What we collect and where it lives

2.1 Stored only on your device

- **Your profile:** name, what you want to focus on, your work or study, birth year, and your sleep and wake times.
- **Your settings:** the apps you chose to track, your hourly limits, alert mode, and other preferences.
- **App usage:** how long the apps you chose were in the foreground, read through Android's Usage Access. We store daily totals for those apps on your device to show your progress, your 14-day summary, and monthly recaps. At setup we also read the system's recent usage history of those apps to estimate your starting point.
- **Your plans and tasks:** the task lists generated for you and whether you completed them.
- **Installed apps:** the app checks which apps are installed on your phone only to show you the picker. This list never leaves your device.

- **Troubleshooting logs:** times, usage numbers, and whether alerts were shown. These stay on your device unless you choose to copy and send them to us.
- **Trial and subscription status.**

None of the above is uploaded to our servers.

2.2 Sent to our server (nightly plan only)

When you submit text for a plan, the app sends:

- the text you typed and the date the plan is for;
- your language;
- profile details used to personalize the result (your name, your work or study, and your focus);
- if you add more tasks later, the titles of tasks already on your list, so we don't duplicate them;
- a random install ID and access token created by the app. There are no accounts.

Like any server, ours also sees technical data such as your IP address and request times.

Our server passes the text and profile details to an AI provider to turn them into a short task list. **We delete the text you typed from our servers as soon as processing finishes.** We keep only the resulting task list (titles, first steps, and time estimates) and its status for up to 30 days so your phone can fetch it, then delete it. Please don't enter sensitive personal information (such as health or financial details) in your plan text.

We also keep technical metadata about requests (counts, AI token counts, status, timestamps, and IP address for rate limiting and abuse prevention) for up to 90 days. This metadata does not contain your text.

2.3 Service providers

- **Anthropic** (AI provider) processes your plan text to generate your task list. See Anthropic's privacy policy for how it handles data.
- **Google Firebase Remote Config** delivers message templates and settings to the app. Google may process a Firebase installation ID, IP address, and basic device and app information.
- **Google Play** distributes the app and handles subscription payments. We receive your purchase status, not your payment card details.

- **Google AdMob** shows ads on the free plan. AdMob may collect your advertising ID, IP address, and device information to serve and measure ads. You can reset your advertising ID or limit ad personalization in your Android settings. Where the law requires it (for example in the EEA and UK), you will be asked for consent first.
- **Our hosting provider** runs the server that handles plan requests.

We do not sell your personal information.

3. Permissions and why we ask

- **Usage Access:** to count time spent in the apps you chose. We read usage times only, never the content of those apps.
- **Display over other apps (optional):** to show small pop-ups and the "time's up" screen over an app you chose. We do not capture or record what is on your screen.
- **Notifications:** to send your reminders and alerts.
- **Battery optimization exemption, run at startup, and an optional foreground service (Always-on mode):** to keep reminders on time.
- **Sound and vibration:** for the short alarm sound (played at your own alarm volume) and vibration.
- **Internet:** for plan requests, settings updates, ads, and billing.

The app does **not** use Android's Accessibility service, and does not access your contacts, SMS, calls, camera, microphone, or location. If you use voice dictation when typing a plan, that is your keyboard's own feature.

4. How we use your data

- To provide the app's features: tracking, alerts, plans, summaries, and recaps.
- To personalize messages, for example by mentioning your goal or your planned tasks.
- To calculate the "Reality check" projection. It is a rough estimate based on your recent usage and an assumed lifespan, not a prediction or medical advice.
- To run, secure, and improve the service and to prevent abuse.
- To comply with the law.

If you are in the EEA or UK, our legal bases are: performing our contract with you (providing the app), your consent (for Usage Access, the overlay permission, and ad personalization where required, which you can withdraw by revoking the permission or

uninstalling), and our legitimate interests in security and preventing abuse.

5. Retention and deletion

- **On your device:** until you clear the app's data, use "Delete my data", or uninstall the app.
- **On our server:** the text you typed is deleted right after processing, task lists and their status for up to 30 days, and request metadata for up to 90 days.
- **"Delete my data"** in Settings immediately deletes everything tied to your install on our server and clears the data on your phone. If you can no longer access the app, email us at [SUPPORT EMAIL] and include your install ID if you have it.

6. Your choices and rights

You can revoke any permission in Android Settings at any time, switch to Gentle mode, pause alerts for the day, turn off the Reality check, or delete your data.

Depending on where you live (for example the EEA, the UK, California, or other US states), you may have the right to access, correct, delete, or export your data, to object to or restrict certain processing, to withdraw consent, and to complain to your data protection authority. Because the app has no accounts, we may need your install ID to find data on our server, and the in-app delete option is the quickest route. You can also contact us at [SUPPORT EMAIL].

7. Children

Life is not directed to children under 13, and we do not knowingly collect personal information from them. If you believe a child has used the app, contact us and we will delete the data. Some features, such as the life-years projection, are hidden for users under 16.

8. Security

Data is sent over HTTPS. Our AI provider's keys are kept on our server and never in the app, and access tokens are stored hashed. No system is perfectly secure, so we cannot guarantee absolute security.

9. International transfers

Our servers and our service providers, including Anthropic and Google, may be located outside your country, including in the United States. Where the law requires it, we rely on appropriate safeguards for those transfers.

10. A note on wellbeing

Life is a self-improvement tool, not a medical or mental health service. Its estimates and messages are meant to motivate, not to diagnose or predict. If screen time or your mood is a source of distress, please consider talking to a qualified professional.

11. Changes to this policy

We may update this policy from time to time. We will change the "Last updated" date, and if the changes are significant we will tell you in the app.
